

North American MACHINE BUILDER

The propriety and patented technology of Racer Machinery International Inc. for metal cutting machine tools has redefined the industry's benchmarks. Through RMI's wealth of experience and technology, we are able to provide innovative and unique solutions for high production metalworking industries. These include, but are not limited to multi-spindle, multi-column and multi-setup compact CNC Machinery.

OUR STORY

Racer Machinery International Inc. is one of the few remaining machine tool builders, and likely the only engine lathe manufacturer left in North America. Our technologically advanced process, and diverse experience, give us the capability to handle projects of a variety of scope and scale. RMI's continued success stems from:

- ✓ Commitment to research & development
- ✓ Over 80 years of engineering experience
- ✓ A dedicated and highly skilled team
- ✓ Quality & innovation in all products

All of which help our customers achieve their company goals.

OUR DIFFERENCE

What makes RMI unique is the ability to offer clients out of the box thinking and solution based designs, with little to no limitations to their manufacturing needs. This results in significant cost savings and performance increases through our technology.

Through our premium commodity brand, Standard Modern™ Lathes, we offer superior design and quality as they were engineered to the specifications of the United States Military. These premium lathes for that reason are widely used by both the Canadian and United States Armed Forces, educational institutions and high precision metalworking companies.
